

BLENDER

GLOS

PROFESSIONAL MIXER

Patented for water-based paints
and thick coating products

BLENDER GLOS

The mixer for water-based paints and thick coating products.

The mixer for water-based paints and thick coating products.

The patented Blender Glos mixer is a professional column system, equipped with alternating rotation and variable speed technology, which prevents air incorporation and maintains the product structure intact.

Blender Glos is covered by an exclusive patent, certifying the superior performance of the technological system and the production process, strictly Made in Italy.

It is essential for optimizing the mixing of high-filling-power coating products, based on lime, acrylic, or siloxane, with a grain size from 0.5 to 2.5 mm. Suitable for trowel-applied finishes such as lime putty, plaster, etc., as well as for all water-based paints.

Mix GlosSystem® Method

Perfect mixing is patented and Rub-Out Test-proof.

The patented Blender Glos system includes the certified Mix Glos System mixing process. The quality of the result does not come from the speed of the operation, but from the excellence of the finished product.

By not incorporating air, Blender Glos ensures homogeneous products, consistent over time, and with optimal performance.

The Mix Glos System method guarantees passing the Rub-Out Test, i.e., the color compatibility test with the base paint.

1

Variable speed and alternating rotation

2

Pre-set and customizable cycles

3

Automatic technology

4

Does not incorporate air

Technology and efficiency

Every detail is designed to achieve top-level production quality results.

QUICK COUPLING

The mixing whisk features a quick bayonet **coupling** and **uncoupling** system.

VARIABLE DIES

The possibility of choosing dies of different diameters allows **optimal centering of the paint bucket**.

PRODUCTIVITY AND EFFICIENCY

The system produces **up to 150 buckets of product per day**, guaranteed by the **quality of the Mix Glos System**.

ELECTRONIC CONTROL PANEL

The electronic control panel allows **selecting different programs** according to the product to be processed.

The company at the service of your needs

The best Made in Italy solutions to simplify work in construction... and beyond.

GLOS Srl is the **Italian company** specialized in industrial mechanics, applied to important sectors such as construction, industry, and the paint sector.

Extensive experience meets a precise production philosophy: offering sector professionals useful technological solutions, designed to solve specific work requirements.

The efficiency and functionality of GLOS Srl equipment are the result of the best **Made in Italy quality**.
